Arithmetic &

English Grammar

Reading &

Spelling —

Joseph Quincy Preceptor

816509

816509

At the subservient annual examination of the New Indian Charity School August 22^d 1810. The Youth exhibited specimens of laudable improvement in the several branches of science, which they have studied under the care of Mr. Joseph Berry their able & worthy instructor. We were particularly pleased with the appearance of the two Indian youth of the Seneca tribe, Jacob Jameson & James Stephen son, their attainments reflect honor upon themselves. A little more than a year ago they were entirely ignorant of reading writing & Arithmetic. Now they are able to read & spell with facility, to write in a style of elegance which could not be expected to explain & apply correctly the principles of arithmetic as far as the end of three. The discipline & instruction of the School the past year, in our opinion, have been such as to merit the approbation & all concerned in its prosperity.
